

Bronze & Brass Valves

JIS 5K/10K, ASME Class 125/150/300, KITZ Type 100/125/150/300/400/600

As a world leader in the manufacture of general service valves, KITZ Corporation is glad to offer a broad range of KITZ bronze/brass valves for commercial and industrial applications.

KITZ bronze/brass valves are exclusively produced in modern factories used for valve manufacturing. Each phase of the manufacturing process, from the selection of raw materials to casting, forging, machining, assembly and testing, has been improved with automated production facilities and unparalleled production technology. Standardization and automation yield KITZ bronze/brass valves of superior quality and higher uniformity at competitive prices supported by incomparably prompt delivery.

KITZ bronze/brass valves are designed by state-of-the-art computers, built by automation, and inspected by people who care about quality.

Design Features of KITZ Bronze/Brass Valves

Human Engineering in Hand wheel Design

The computer designed hand wheels of all KITZ bronze/brass valves, the product of KITZ human engineering, feature the ideal combination of operational efficiency and high mechanical strength for reliability.

Asbestos-free Gland Packing

All KITZ bronze/brass gate and globe valves employ Aramid Fiber PTFE as the material in the asbestos-free gland packing, which meets the latest industrial requirement to minimize concerns about pollution. With the leak-free sealing performance and reduced valve operating torque, Aramid Fiber PTFE is considered a reliable substitute for conventional asbestos sheets for the service of water, oil, gas, and saturated steam pressure at a maximum 300psi at temperatures up to 300°C.

Pressure Rating

The pressure rating designation of KITZ valves follows the accepted practice of today's valve and pipe fitting industry. Each product is rated for W.O.G. (Non-shock cold water, oil, and gas*) and Saturated steam pressure service.

Inspection and Testing

KITZ valves are manufactured under strict quality control requirements throughout all stages of production, beginning with the inspection of the chemical composition and the mechanical properties of the materials. Extra care is given to inspection and testing at all machine shops and assembly plants by using up-to-date precision equipment. All KITZ valves meet strict pressure testing specifications for the body and seat seals to assure a long service life and quality performance.

*The valves presented in this catalog are not designed to handle toxic gases.

Use specially designed or certified valves for flammable gas service.

KITZ Corporation, Chino Plant, Japan (ISO 9001)

KITZ (Thailand) Ltd, Bangkok Plant, Thailand (ISO 9001)

This catalog uses MPa, an SI unit, to indicate pressure. For reader convenience, however, psi is also used for ASME and JIS related products, respectively [he products in this catalog are all covered by ISO 9001 certification.

KITZ "K-Metal": Unique Dezincification-Resistant Brass (UNS No. C35350)

Water pollution and employment of new piping material have amplified valve dezincification problems.

What is dezincification?

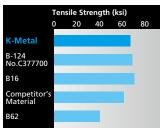

The copper alloy used in bronze valves contains zinc, tin, and lead, with copper as the base. When bronze valves are subjected to unfavorable service conditions, the zinc component of the copper alloy separates from the copper base, and the metal corrodes. This is called dezincification.

In the case of a bronze valve, the body, bonnet, and other cast bronze parts rarely corrode, because of the small percentage of zinc contained in the alloy. However, brass valve parts such as stems, which contain 40% zinc, often corrode because of extreme dezincification.

What causes dezincification?

The following factors cause dezincification. These factors are generally believed to occur together, rather than independently.

- Excessive acidity in aqueous solution.
- Warm water containing excessive free carbonic acid with high electric conductivity.
- 3 High electric conductivity with presence of excessive chlorides and sulfides.
- Copper or vinyl chloride pipes.
- Excessive dissolved oxygen.

Bronze/Brass Valve Solder Joints

Copper tubing is widely used with bronze/brass valves in steam and water-line applications in schools, hospitals, hotels, and private houses because of its excellent physical characteristics. It resists corrosion, meets sanitation requirements, and is easy to install.

Copper Tubes: Three types of copper tubing have been developed for complying with ASTM B88, as listed below. Each type is provided with a different wall thickness to meet application requirements.

| Туре К | For use in steam, oil, and gas lines for underground installation and/or severe conditions. |
|--------|---|
| Type L | For general cooling and heating systems and related water piping and ventilation systems. |
| Туре М | For home air-conditioning and heating applications. |
| | |

| <u></u> ∴ CAUTION | Solder-jointed end valves should not be used in service where the temperature of the line fluid is higher than the softening point of the solder. |
|--------------------------|---|

Soldering of Leak Free Joints

Use solder of 95-5 tin-antimony or 96-4 tin-silver, and an open-flame torch. Keep the torch temperature relatively low to ensure a firmly soldered joint. Because the melting point of the solder is at around 500°F (260°C), solder-jointed valves cannot be used for high-temperature service.

Compliance with RoHS Requirements

With the aim of reducing any adverse impact on environmental health, KITZ CORPORATION can offer products that satisfy the requirement of using six hazardous substances—mercury, lead, cadmium, hexavalent chromium, PBB, and PBDE—imposed by the RoHS* directive of EU, to the market. The products satisfying this requirement bear the symbol shown below. Please consult KITZ for more details on these products.

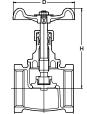

^{*}The Restriction of the use of certain Hazardous Substances in electrical and electronic equipment

Technical data of pressure and temperature ratings of JIS-standard bronze valves

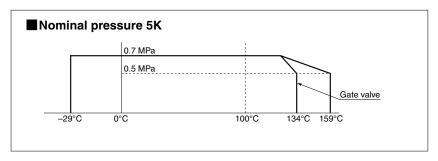

- 1. Fluid
 - Water, oil, gas, air and steam. However, Flammable gas and toxic gas are excluded.
- 2. Relationship between the temperature of the fluid and the maximum permissible pressure (hereinafter referred to as the "pressure-temperature criteria") shall be in accordance with Table 1. However, the fluid shall not be frozen.
- 3. In the case where the use of valves is prohibited or restricted by the High Pressure Gas Safety Act and other regulations, the user shall use them within the framwork of laws and ordinances.

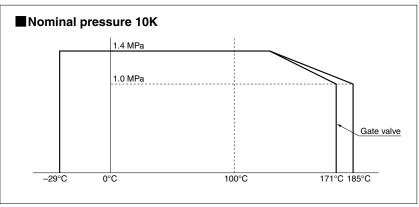

| Nominal pressure | Temperature of fluid °C | Maximum permissible working pressure ^{c)} MPa |
|------------------|----------------------------|--|
| EV | -29 to 120 | 0.7 |
| 5K | 159 ^{a)} | 0.5 |
| 101/ | -29 to 120 | 1.4 |
| 10K | 185 ^{b)} | 1.0 |

Table 1 Pressure-temperature criteria

Notes

- a) It shall be the maximum service temperature, and in the case of a gate valve, it shall be 134°C.
- b) It shall be the maximum service temperature, and in the case of a gate valve, it shall be 171°C.
- c) The maximum permissible pressure at an intermediate temperature between a temperature above 120°C and the maximum service temperature shall be obtained by proportional interpolation.

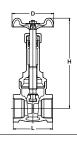

BRONZE GATE VALVE

Screwed bonnet, Rising stem, Designed to MSS SP-80 type 2, Threaded ends to NPT or solder joint ends

Design feature of KITZ S Ball Valve: ball valve with a check valve built in its body.

Compact design with a check valve built in the body of the ball valve.

Prevention of reverse flow by automatic closing of the spring-loaded built-in check valve (water hammer proof). Quarter-turn operation with detachable handle for easy mounting or maintenance of the valve, and piping insulation. Direct installation of the valves to flexible pipes on the downstream side.

UTILITY BALL VALVES, STRAIGHT TYPE

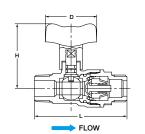

Ball valve with built-in check valve, Male (parallel) & male threaded ends to BS21

1.0 MPa water, 0°C to +40°C (not freezing)

Direct flow 40°C max, Reverse flow 80°C max.

DISCLAIMER

- •KITZ does not take any responsibilities for damages arising from a result of natural disasters, accidents or fire which KITZ is not liable for, conduct of a third party, intentional act, misuse or use under abnormal conditions by a customer.
- ●KITZ does not take any responsibilities for damages arising from negligence of the prohibitions and cautions given in the catalogs and operation manuals, or installation and usage beyond the specification range.
- ●KITZ does not take any responsibilities for damages arising from product modification not entrusted to KITZ or usage under the load applied from other devices.

Pressure-temperature ratings and other performance data published in this catalog have been developed from our design calculation, in-house testing, field reports provided by our customers and / or published official standards or specifications. They are good only to cover typical applications as a general guideline to users of KITZ products introduced in this catalog.

For any specific application, users are kindly requested to contact KITZ Corporation for technical advice, or to carry out their own study and evaluation for proving the suitability of these products to such an application. Failure to follow this request could result in property damage and/or personal injury, for which we shall not be liable.

While this catalog has been compiled with the utmost care, we assume no responsibility for errors, impropriety, or inadequacy. Any information provided in this catalog is subject to from-time-to-time change without notice for error rectification, product discontinuation, design modification, new product introduction or any other cause that KITZ Corporation considers necessary. This edition cancels all previous issues.

Read the instruction manual carefully before use.

NOTICE

If any products designated as strategic material in the Foreign Exchange and Foreign Trade Law, Cabinet Ordrer Concerning Control of Export Trade, Cabinet order Concerning Control of Foreign Exchange and other related laws and ordinances ("Foreign Exchange Laws") are exported to any foreign country or countries, an export license issued by the Japanese Government will be required under the Foreign Exchange Laws.

Further, there may be cases where an export license issued by the government of the United States or other country will be required under the applicable export-related laws and ordinances in such relevant countries.

The contract shall become effective subject to the fact that a relevant export license is obtained from the Japanese Government.

A chrysanthemum-handle is a symbol of KITZ, the brand of valve reliability
